ABDELGAFFAR AHMED ABDELHADY

Flutter Developer | Dart | BLoC/Cubit | Clean Architecture | REST APIs | Firebase | Full-Stack & AI

Moscow, Russia | ahmedabdelhady0246@gmail.com | +7 996 846 9573 | Telegram: @xrotw | GitHub: github.com/kauroah

PROFESSIONAL SUMMARY

Flutter Developer experienced in building production-ready mobile applications and full-stack digital products. Specialized in Flutter/Dart, BLoC/Cubit, Clean Architecture, REST API integration, Firebase, secure authentication, scalable feature-based architecture, and performance optimization. Experienced in AI/ML integrations using ONNX Runtime, OpenAI API, and LLMs.

TECHNICAL SKILLS

Mobile Development & State Management: Flutter SDK, Dart, BLoC, Cubit, Provider, Riverpod, Dio, HTTP, Firebase, Push Notifications, Flutter Secure Storage, Performance Optimization

Architecture, APIs & Security: Clean Architecture, Modular Architecture, Feature-Based Architecture, RESTful APIs, API Integration, JWT Authentication, Secure Storage, Session Management

Web, Backend & Data: JavaScript, TypeScript, Next.js, Vue.js, Node.js, PostgreSQL, MySQL, Firebase Firestore, Supabase, Prisma, Redis

AI, Testing & Dev Tools: ONNX Runtime, OpenAI API, LLM Integration, Unit/Widget/Integration Testing, Git, Docker, Linux, CI/CD, App Store / Google Play / RuStore Publishing

PROFESSIONAL EXPERIENCE

Flutter Developer | Founders - Full-time | *June 2025 - August 2026*

- Designed and implemented the mobile architecture of an investment platform using Flutter, Dart, BLoC, and a modular feature-based structure.
- Developed scalable Flutter features for investment listings, request flows, profile screens, search, filtering, and user interactions.
- Integrated REST APIs and Firebase services for authentication, data synchronization, and core application functionality.
- Built maintainable state management with BLoC/Cubit and clear separation between UI, business logic, and data layers.
- Improved application performance by approximately 30% through refactoring, widget optimization, and more efficient state management.
- Contributed to the MVP launch and worked with API services, data models, reusable widgets, secure storage, and production-ready architecture.

SELECTED PROJECTS

PneumoAI - AI Medical Image Analysis Platform | *Graduation Project*

- Developed an AI-powered medical image analysis platform covering frontend, backend, authentication, AI inference, and report generation workflows.
- Integrated machine learning models using ONNX Runtime and developed REST APIs for image uploads, analysis requests, results, history, and reports.
- Implemented an LLM-based AI assistant for contextual medical explanations and backend workflows for data processing and analysis history.

Technologies: Next.js, TypeScript, Node.js, PostgreSQL, REST APIs, ONNX Runtime, LLM Integration, Docker

Adam & Eve - Dessert Ordering Mobile Application | *Published Mobile Application*

- Developed a production Flutter application for dessert ordering, customer management, and business workflows.
- Built backend API services and database structure for users, products, orders, authentication, payment functionality, and push notifications.
- Prepared and published the application on the App Store, Google Play, and RuStore.

Technologies: Flutter, Dart, Node.js, REST APIs, JWT Authentication, Database Design, Push Notifications, Payment Integration

Published: App Store | Google Play | RuStore

AI Code Review Assistant | *AI-Powered Full-Stack Application*

- Developed a full-stack web application using Next.js, TypeScript, Node.js, and REST APIs.
- Integrated LLM APIs to analyze source code and generate automated code review suggestions.
- Implemented secure authentication, responsive dashboards, repository analysis workflows, and a Docker-based deployment setup.

Technologies: Next.js, TypeScript, Node.js, REST APIs, JWT Authentication, LLM APIs, Docker

EDUCATION

Master's Degree in Software Engineering - RTU MIREA, 2026 - 2028 (Year 1)

Awarded a state-funded place under the Russian Federation quota for the education of foreign citizens and stateless persons (Ministry of Science and Higher Education of Russia).

Bachelor's Degree in Software Engineering - Kazan Federal University, 2022 - 2026

LANGUAGES

Arabic - Native | Russian - Fluent | English - Fluent
