AHMED ABDELHADY MOHAMED

Full-Stack Developer | TypeScript | Next.js | Node.js | PostgreSQL | REST APIs | AI Integration

Moscow, Russia | ahmedabdelhady0246@gmail.com | +7 996 846 9573 | Telegram: @xrotw | GitHub: github.com/kauroah

PROFESSIONAL SUMMARY

Full-Stack Developer with experience building user-facing applications, backend services, and third-party API integrations. Core web stack: TypeScript, JavaScript, Next.js, Node.js, PostgreSQL, and REST APIs. Built full-stack products with JWT authentication, session management, databases, Docker-based environments, and AI/LLM integrations. I also have production mobile development experience, which gives me a strong understanding of the complete product lifecycle - from UI and client-side logic to APIs, data persistence, security, testing, deployment, and release.

TECHNICAL STACK

- Frontend: TypeScript, JavaScript (ES6+), Next.js, React-based component architecture, Vue.js, responsive UI, REST API integration, JSON, async/await, client-side state and data flows.
- Backend: Node.js, RESTful API design, routing, controllers/services, request validation, error handling, JWT authentication, session management, and integration with third-party services.
- Databases & Data: PostgreSQL, MySQL, Supabase, Firebase Firestore, Prisma, Redis; CRUD operations, data models, relationships, persistence, and application data flows.
- Architecture & Security: Clean Architecture, Modular Architecture, Feature-Based Architecture, separation of UI/business/data layers, secure storage, authentication and authorization flows.
- DevOps & Quality: Docker, Linux, Git/GitHub, CI/CD, unit/integration testing, debugging, refactoring, code review, and production release workflows.
- AI & Model Integration: OpenAI API, LLM integration, ONNX Runtime; integration of AI inference and AI assistants into user-facing workflows.
- Additional Mobile Stack: Flutter, Dart, BLoC/Cubit, Provider, Riverpod, Firebase, push notifications, Dio/HTTP, secure storage, and mobile app publishing.

PROFESSIONAL EXPERIENCE

Flutter Developer | Founders

Full-time | June 2025 - August 2026

- Contributed to the development of a production investment platform, implementing user flows for investment opportunities, requests, profiles, search, filtering, and data-driven interactions.
- Integrated REST APIs and Firebase services for authentication, data synchronization, and core product functionality; worked with API models, JSON processing, and loading/error states.
- Worked on application architecture and separation of UI, business logic, and data layers using BLoC/Cubit and a modular feature-based structure.
- Implemented secure user-session storage, reusable components, exception handling, and stable production-ready user flows.
- Contributed to the MVP launch and improvement of the existing codebase through refactoring and application performance optimization.
- Improved application performance by approximately 30% by optimizing components, reducing unnecessary UI rebuilds, and improving state management.

SELECTED FULL-STACK PROJECTS

AI Code Review Assistant | Full-Stack & AI Integration Developer

- Built a full-stack web application with Next.js, TypeScript, and Node.js for source-code analysis and generation of structured code-review recommendations.
- Designed frontend-to-backend communication through REST APIs, including source-code submission, request processing, analysis-result retrieval, and presentation of structured responses.
- Integrated an LLM API into the backend workflow and implemented prompt preparation and AI-response processing for the user interface.
- Implemented JWT authentication, protected user flows, responsive dashboards, and a Docker-ready deployment configuration.

Stack: Next.js, TypeScript, Node.js, REST APIs, JWT Authentication, LLM APIs, Docker

PneumoAI | AI Medical Image Analysis Platform | Full-Stack / Applied AI

- Developed a full-stack graduation-project prototype covering frontend, backend, authentication, AI inference, analysis history, and report generation.
- Implemented backend workflows for image uploads, analysis execution, result storage, and history retrieval through REST APIs.
- Integrated machine-learning models through ONNX Runtime and connected the inference workflow with the user interface and result-storage system.
- Added an LLM-based assistant for contextual explanations and built backend orchestration between analysis results, stored data, and AI-generated responses.
- Used PostgreSQL for application data storage and Docker for reproducible development and deployment environments.

Stack: Next.js, TypeScript, Node.js, PostgreSQL, REST APIs, ONNX Runtime, LLM Integration, Docker

Adam & Eve | Dessert Ordering Platform | Full-Stack Mobile Product

- Developed the production Flutter client and backend components for a dessert-ordering product covering users, products, and order management.
- Designed and integrated REST APIs and the database structure for users, catalog data, orders, JWT authentication, and core business operations.
- Integrated payment functionality and push notifications, and implemented user-session handling and client-to-backend communication.
- Prepared production releases and published the application on the App Store, Google Play, and RuStore.

Stack: Flutter, Dart, Node.js, REST APIs, JWT Authentication, Database Design, Push Notifications, Payment Integration

EDUCATION

Master's Degree in Software Engineering | RTU MIREA | 2026-2028 (Year 1)

Awarded a state-funded place under the Russian Federation quota for the education of foreign citizens and stateless persons (Ministry of Science and Higher Education of Russia).

Bachelor's Degree in Software Engineering | Kazan Federal University | 2022-2026

LANGUAGES

Arabic - Native | Russian - Fluent | English - Fluent
